

VT Double Pro® RIB Complete® Corn

## PRODUCT INFORMATION

LG32C27 is broadly adapted as to all soils, management practices and planting dates. High yields are expected from this shorter, great looking product with excellent standability and girthy ears.

- High yields and a great look at harvest with very good staygreen and fall intactness.
- Superior standability, medium short plants that produce good test weight grain on consistent girthy ears.
- Excellent scores against NCLB with very good tolerance to SCLB, Eye Spot, GLS and Common Rust.
- Very good drought and stress tolerance; avoid moderate to high Goss's Wilt situations.

## MANAGEMENT TIPS

Performs best as full season product, with strong performance on medium and fine textured soils, Handles poorly drained soils well. Benefits from sidedress applications and higher rates of nitrogen. Higher populations will express its maximum yield potential. Caution is suggested in areas prone to Goss's Wilt. Can be effectively used in continuous corn situations.

GDU's are estimates based on observations and are to provide guidelines for area adaptation. Scores and characteristics are assigned by LG Seeds based on comparisons with similar maturity LG and competitive products through internal field testing. Preferred Placement Zones represent the best areas of adaptation for a product based on in-field observations, genetic background, and trial data. Products may fit within only a portion of a zone, and products may perform well in other areas not identified. Contact your sales team for details.
