

VT Double Pro® RIB Complete® Corn

PRODUCT INFORMATION

LG33C82 is widely adapted, has great agronomics, good disease characterizations, and solid yield potential.

- Performs well across many geographies with good quality grain produced from semi-flex, yet consistent, ears.
- Excellent emergence and early growth; plants have excellent standability, and great tolerance against greensnap.
- Excellent plant health with high tolerances against NCLB, SCLB, GLS, Eye Spot and leaf Anthracnose.
- Plant at higher populations to maximize yield potential on lighter, more coarse soils.

MANAGEMENT TIPS

Good for early planting and minimum or no-till situations. Caution is suggested in areas prone to Goss's Wilt. Recommended for continuous corn situations. Plant at higher populations to maximize yield potential. Performs better on lighter, coarse soils.

PLANT CHARACTERISTICS

GDUs are estimates based on observations and are to provide guidelines for area adaptation. Scores and characteristics are assigned by LG Seeds based on comparisons with similar maturity LG and competitive products through internal field testing. Preferred Placement Zones represent the best areas of adaptation for a product based on in-field observations, genetic background, and trial data. Products may fit within only a portion of a zone, and products may perform well in other areas not identified. Contact your sales team for details.
