

VT Double Pro® RIB Complete® Corn

PRODUCT INFORMATION

LG5370 has top end yield potential and good test weight grain. Ears have good flex and girth. Plants have great late season appearance and good staygreen.

- Top-end yield potential from moderately statured plants that produce ears having good flex and girth.
- Grain is of good test weight; great late season appearance and good greensnap tolerance.
- Good NCLB and Eye Spot tolerance; has a gene conveying very good specific tolerance to Anthracnose stalk rot.
- Performs well on all soils; ear flex handles varying populations; fungicides may be warranted in continuous corn.

MANAGEMENT TIPS

Broadly adapted across northern corn belt, and is best planted in its appropriate maturity zone. Good for early planting, adapts to all soils. Good ear flex provides for flexibility in planting populations. Fungicides are recommended when planting in continuous corn.

GDU's are estimates based on observations and are to provide guidelines for area adaptation. Scores and characteristics are assigned by LG Seeds based on comparisons with similar maturity LG and competitive products through internal field testing. Preferred Placement Zones represent the best areas of adaptation for a product based on in-field observations, genetic background, and trial data. Products may fit within only a portion of a zone, and products may perform well in other areas not identified. Contact your sales team for details.
