

VT Double Pro® RIB Complete® Corn	Conventional				
-----------------------------------	--------------	--	--	--	--

PRODUCT INFORMATION

LG5375 is early flowering for its maturity with great agronomics, producing grain with good test weight. A medium to shorter statured plant with semi-flex ears.

- Widely adapted with excellent top end yield potential, very early flowering for its maturity.
- Great agronomic package, strong stalks and roots and high grain quality with flared open husks at maturity.
- Very good disease characterizations include average Goss's tolerance, exhibits good stress and greensnap tolerance.
- Can be planted in corn-after-corn situations but should be scouted for possible fungicide applications.

MANAGEMENT TIPS

LG5375 adapts to all soils, flowers early for its maturity, and performs well across Wisconsin, Minnesota and the Dakotas. Best performance does require higher populations. Can be planted in corn-after-corn situations but should be scouted for possible fungicide applications.

GDU's are estimates based on observations and are to provide guidelines for area adaptation. Scores and characteristics are assigned by LG Seeds based on comparisons with similar maturity LG and competitive products through internal field testing. Preferred Placement Zones represent the best areas of adaptation for a product based on in-field observations, genetic background, and trial data. Products may fit within only a portion of a zone, and products may perform well in other areas not identified. Contact your sales team for details.
