PRODUCT INFORMATION

LGS00885R2 is proven medium-tall, rugged, solid yielding product for tough northern soil conditions. The agronomic package supports flexibility in the north.

- Stable performance and high yield potential.
- Excellent emergence and very good standability.
- Multi-genetic resistance to Phytophthora Root Rot, Soybean Cyst Nematode resistance.
- Maintains plant height to provide excellent stress tolerance.

MANAGEMENT TIPS

Adaptable to varying soil types. Holds its height in stress environments. Excellent performance under reduced tillage situations and in all row spacings.

GDUs are estimates based on observations and are to provide guidelines for area adaptation. Performance may vary from location to location and from year to year, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's fields. Preferred Placement Zones represent the best areas of adaptation for a product based on in-field observations, genetic background, and trial data. Products may fit within only a portion of a zone, and products may perform well in other areas not identified. Contact your sales team for details.
