

LGS00909R2

0.09 RM

PRODUCT INFORMATION

LGS00909R2 works across the entire far northern regions. Is an elite product for historical Iron Deficiency Chlorosis (IDC) environments.

- Medium tall, thin-line plants extend the pod set well above then the ground.
- Brown Stem Rot resistant for added protection in bean-on-bean acres.
- Very good IDC and White Mold tolerance scores and provides very good PRR protection.
- Responsive to enhanced yield management systems.

MANAGEMENT TIPS

Have been proven to work well on continuous soybean acres. Adaptable to varying soil types. Holds its height in stress environments. Excellent performance under reduced tillage situations and in all row spacings.

9 = Excellent 1 = Poor N/A = Not Available

GDUs are estimates based on observations and are to provide guidelines for area adaptation. Performance may vary from location to location and from year to year, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's fields. Preferred Placement Zones represent the best areas of adaptation for a product based on in-field observations, genetic background, and trial data. Products may fit within only a portion of a zone, and products may perform well in other areas not identified. Contact your sales team for details.
