

## PRODUCT INFORMATION

LGS011RRX has very good performance in this maturity. Superior agronomics and is a key product in this maturity.

- High yield potential — the soybean for North Dakota and northern Minnesota!
- A taller, thin-line plant style handles northern soils well.
- Resistance to Phytophthora Root Rot coupled with strong IDC, BSR and White Mold tolerances.
- Excellent drought and stress tolerance.

## MANAGEMENT TIPS

Adaptable to varying soil types. Holds its height in stress environments. Excellent performance under reduced tillage situations and in all row spacings.

GDUs are estimates based on observations and are to provide guidelines for area adaptation. Performance may vary from location to location and from year to year, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's fields. Preferred Placement Zones represent the best areas of adaptation for a product based on in-field observations, genetic background, and trial data. Products may fit within only a portion of a zone, and products may perform well in other areas not identified. Contact your sales team for details.
