

PRODUCT INFORMATION

LGS0230R2 is an elite product for historical Iron Deficiency Chlorosis (IDC) environments. Well adapted to far northern acres.

- Excellent scores against IDC.
- No gene for resistance to the Soybean Cyst Nematode.
- Resistance to Phytophthora Root Rot and Brown Stem Rot; highly tolerant to White Mold.
- Excellent option for sands and silt based soils.

MANAGEMENT TIPS

Adaptable to varying soil types. Holds its height in stress environments. Excellent performance under reduced tillage situations and in all row spacings.

9 = Excellent 1 = Poor N/A = Not Available

GDUs are estimates based on observations and are to provide guidelines for area adaptation. Performance may vary from location to location and from year to year, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's fields. Preferred Placement Zones represent the best areas of adaptation for a product based on in-field observations, genetic background, and trial data. Products may fit within only a portion of a zone, and products may perform well in other areas not identified. Contact your sales team for details.
