

LGS0355RX

0.3 RM

PRODUCT INFORMATION

LGS0355RX will be a key IDC variety in the LG Seeds lineup as it has shown outstanding tolerance in research trials. It is a broad placement product with very high yields over 2 years.

- Excellent results over a wide range of soils and yield environments.
- Showy plant with lots of lateral branching loaded with pods.
- Resistance to SCN and PRR, very good tolerance to IDC, and good ratings against BSR and White Mold.
- Has the ability to move west into drought stressed environments.

MANAGEMENT TIPS

Adaptable to varying soil types. Holds its height in stress environments. Excellent performance under reduced tillage situations and in all row spacings.

GDUs are estimates based on observations and are to provide guidelines for area adaptation. Performance may vary from location to location and from year to year, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's fields. Preferred Placement Zones represent the best areas of adaptation for a product based on in-field observations, genetic background, and trial data. Products may fit within only a portion of a zone, and products may perform well in other areas not identified. Contact your sales team for details.
