

# LGS0400RX

0.4 RM

## PRODUCT INFORMATION

LGS0400RX is a key variety that competes all ways (Yield, IDC and PRR protection). This variety features a good clean look with yield across the rows!

- Broadly adapted with top end yield potential.
- Provides good plant height with good standability.
- Very good scores against IDC, and solid for White Mold and BSR, SCN and PRR resistance.
- Good option on drought stressed acres and on variable soils.

## MANAGEMENT TIPS

LGS0400RX has very good IDC tolerance to outyield the competition from Crookston to Benson, Minnesota; while having the ability to move west to Carrington and Parshall, North Dakota. Holds its height in stress environments. Excellent performance under red

GDUs are estimates based on observations and are to provide guidelines for area adaptation. Performance may vary from location to location and from year to year, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's fields. Preferred Placement Zones represent the best areas of adaptation for a product based on in-field observations, genetic background, and trial data. Products may fit within only a portion of a zone, and products may perform well in other areas not identified. Contact your sales team for details.
