

PRODUCT INFORMATION

LGS0550RX is a key line for this maturity group. Solid agronomics, great disease and top end yields. Widely adapted across the northern regions in Minnesota and the Dakotas.

- Fantastic yield potential.
- Medium statured plants have excellent emergence and standability.
- Solid IDC and White Mold scores compliment resistance to SCN and Phytophthora.
- Has the plant height for good performance on tough acres.

MANAGEMENT TIPS

Has been proven to work well on continuous soybeans acres. Adaptable to varying soil types. Holds its height in stress environments. Excellent performance under reduced tillage situations and in all row spacings.

GDUs are estimates based on observations and are to provide guidelines for area adaptation. Performance may vary from location to location and from year to year, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's fields. Preferred Placement Zones represent the best areas of adaptation for a product based on in-field observations, genetic background, and trial data. Products may fit within only a portion of a zone, and products may perform well in other areas not identified. Contact your sales team for details.
