

# LGS0774RX

0.7 RM

## PRODUCT INFORMATION

LGS0774RX has a great, uniform look across the field and produces high yields. Widely adapted across the northern regions in Minnesota and the Dakota's.

- Strong candidate for Iron Deficiency Chlorosis soils.
- Very good White Mold tolerance.
- Resistance to Brown Stem Rot and Soybean Cyst Nematodes.
- Excellent emergence and stress tolerance.

## MANAGEMENT TIPS

Excellent adaptability to no-till and minimum tillage. Well adapted to all common row spacings. Handles stress very well and is adapted to all soils. Very strong performance across the northern Corn Belt. Can be used effectively north of its adapted zone

## PLANT CHARACTERISTICS

## PREFERRED PLACEMENT ZONE

| Geography |
|-----------|
| Western   |
| Eastern   |
| Coastal   |
| All       |

9 = Excellent 1 = Poor N/A = Not Available

GDUs are estimates based on observations and are to provide guidelines for area adaptation. Performance may vary from location to location and from year to year, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's fields. Preferred Placement Zones represent the best areas of adaptation for a product based on in-field observations, genetic background, and trial data. Products may fit within only a portion of a zone, and products may perform well in other areas not identified. Contact your sales team for details.
